

Working Prototype Known Problems Report

- PeersChat
- PCP
- 7/23/20

List of Functions Currently Not Working Properly

- void joinButtonPressed(GtkWidget *widget, gpointer data);
- void kick_button_callback(GtkWidget *widget, gpointer data);
 - None of these functions cause any errors with the application, but the intended functionality is not yet implemented into the system. We plan to add the functionalities for these functions in the near future.
- void refresh_name_list();
 - Sometimes the person acting as host will not have the list of names refreshed when a person joins the chat. Could be a situation where the function is not being called when it is supposed to be.
